

Please check the notes appearing in red on the schematic pages. In addition, please check the Errata document of the respective product (the potential issues discovered/reported are going to appear in the Errata first). Follow the guidance provided in the relevant Carrier Board Design Guide. Please carefully review your designs against all of the sections of the Carrier Board Design Guide before proceeding with manufacturing your custom carrier board. The documents referenced are available on our Developer Website.

### Input Power- Overvoltage Protection and EMI Filter

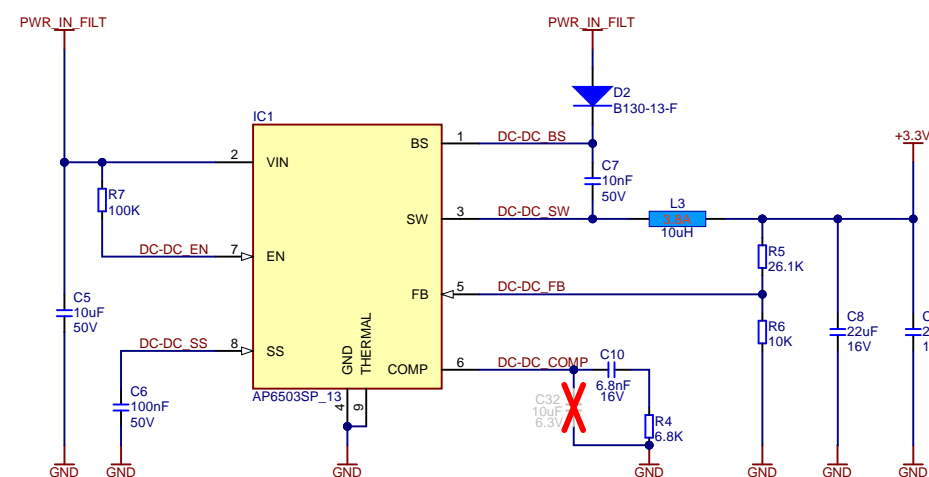

**Note 1:**  
Recommended Power Supply: Voltage: 5V, +/- 0.25V, Current: 5A (MAX)  
**IMPORTANT:** Power supply is not reverse polarity and overvoltage protected.

### Power Input - Colibri

DC/DC Buck Regulator: PWR\_IN\_FILT to 3.3V, 3A

## Power Reset and Control - Colibri

### Input Power- Power-On Indication

## Analogue/Audio Power

**WARNING:**  
The LED signals are prone to backfeed to the module if the Ethernet PHY rails are powered off while the carrier board rails are still on. Therefore, decoupling the ETH\_LINK\_ACT and ETH\_SPEED signals from the LEDs is recommended. To prevent ETH LED backfeeding issues an external buffer circuit is required. Check the relevant section of the Colibri Carrier Board Design Guide for details.

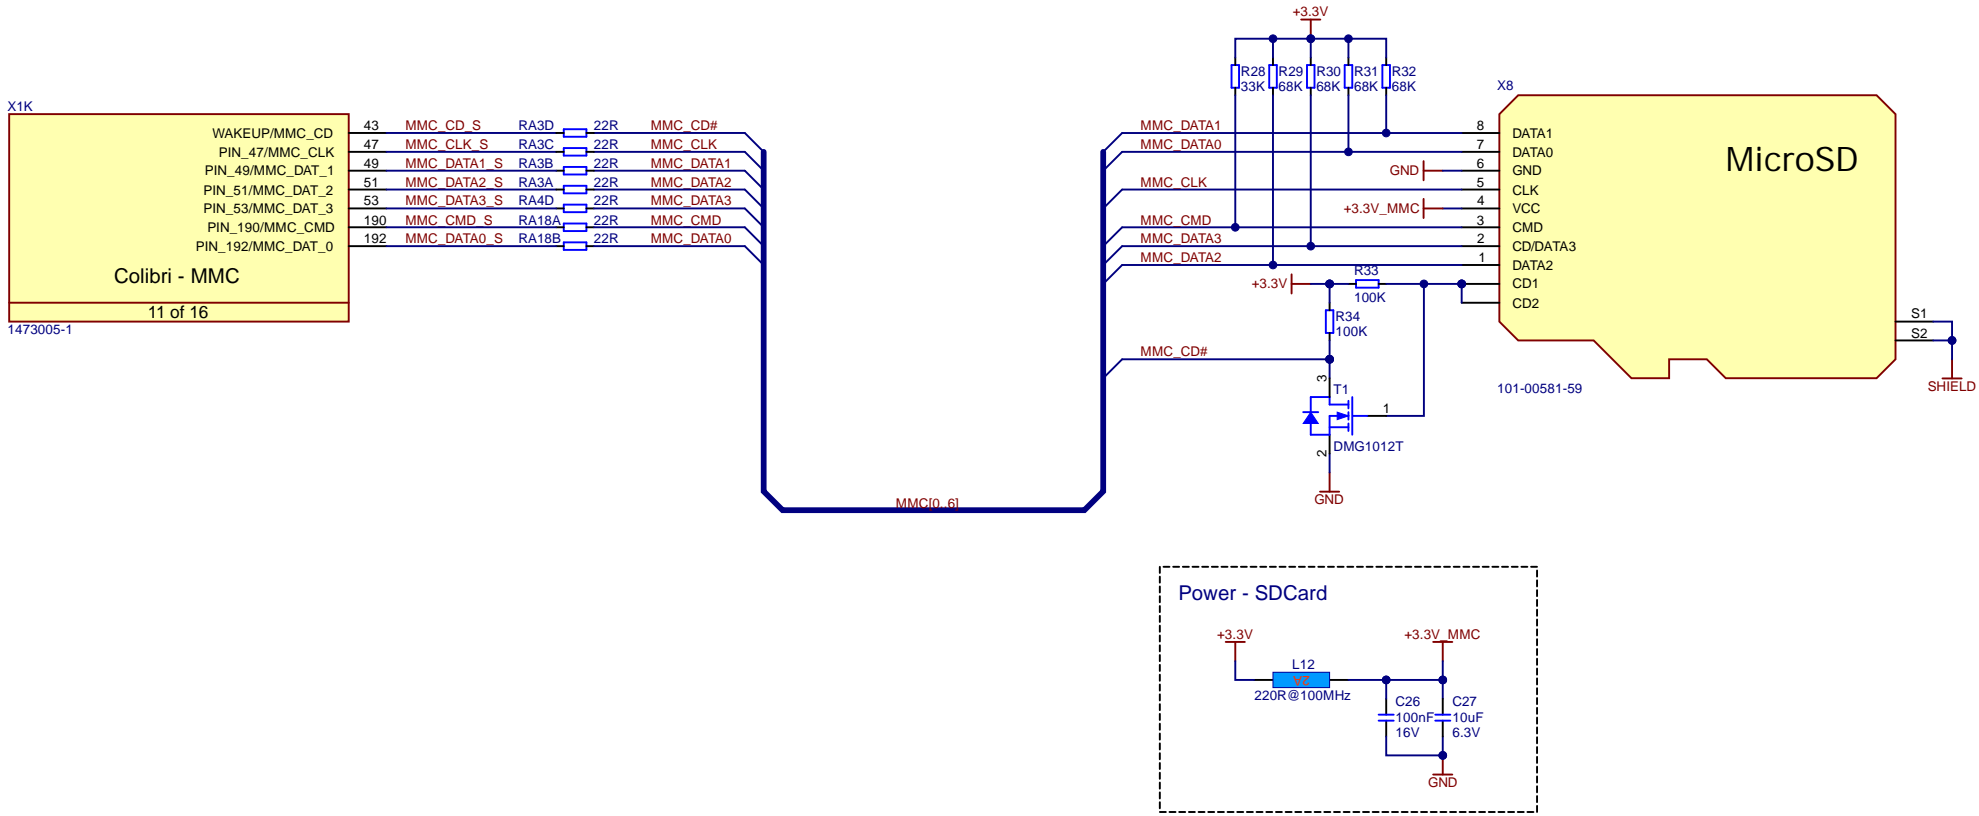

Note 4:  
PIN 1-2 = DM9000E ON PXA270  
PIN 2-3 = DM9000A/ASIX on other module
